

EXHAUST SYSTEM FOR AN INTERNAL COMBUSTION ENGINE

ABSTRACT OF THE DISCLOSURE

Disclosed is an exhaust system (100) for an internal combustion engine, comprising a first exhaust leg that is provided with a penetrable first muffler (120), especially a rear muffler, and at least one second exhaust leg which runs parallel to the first one and encompasses a second penetrable muffler (122) particularly a rear muffler. The structure of the first muffler (120) differs from that of the second muffler (122).
